1985 STUDY OF MULTIPLE APPLICATIONS:
INSTITUTIONAL SUPPLEMENT

1985 STUDY OF MULTIPLE APPLICATIONS:
INSTITUTIONAL SUPPLEMENT

October, 1985

Alberta
ADVANCED EDUCATION

RESEARCH, SCIENCE AND PLANNING

TABLE OF CONTENTS

TABLE OF CONTENTS

INTRODUCTION

1. The purpose of this report is to provide institutional information on applicants for 1985 post-secondary places. The information is derived from the results of the Multiple Applications Study carried out by Alberta Advanced Education in cooperation with 26 Alberta post-secondary institutions in 1985 (Data from one Hospital School of Nursing were not suitable for analysis, and therefore were not included in the report).

2. The Study examined the rate and pattern of multiple applications made by prospective students for places for fall 1985.

3. A description of the objectives of the study, the methodology used and a discussion of some of the limitations of the data are provided in the main report, "The 1985 Study of Multiple Applications."

4. The data contained in this supplement to the main report are designed to provide background information on applicants which may be of assistance to the participating institutions.

5. Institutional data are provided for three Universities, three Technical Institutes, ten Public Colleges, four Private Colleges and five Hospitals participating in the study. The data consist of:

    i) Box diagrams depicting the pattern of multiple applications from the perspective of each institution. The data are taken from the global Table and Matrix found in Section 3 of this report.

    ii) Bar diagrams showing the proportion of applicants within selected age groups.

    iii) Pie diagrams depicting the male/female distribution of applicants.

    iv) Pie diagrams indicating the geographic location of applicants.

6. Other information provided in this report consists of:

INTRODUCTION

1. The purpose of this report is to provide institutional information on applicants for 1985 post-secondary places. The information is derived from the results of the Multiple Applications Study carried out by Alberta Advanced Education in cooperation with 25 Alberta post-secondary institutions in 1985. (Data from one hospital School of Nursing were not suitable for analysis, and therefore were not included in the report).

2. The Study examined the rate and nature of multiple applications made by prospective students for places for Fall 1985.

3. A description of the objectives of the study, the methodology used and a discussion of some of the limitations of the data are provided in the main report, "The 1985 Study of Multiple Applications".

4. The data contained in this supplement to the main report are designed to provide background information on applicants which may be of assistance to the participating institutions.

5. Institutional data are provided for three universities, three Technical Institutes, ten Public Colleges, four Private Colleges and five hospitals participating in the study. The data consist of:

(i) Box diagrams depicting the pattern of multiple applications from the perspective of each institution. The data are taken from the global Table and Matrix found in Section 3 of this report.

(ii) Bar diagram showing the proportion of applicants eligible selected by age groups.

(iii) Pie diagrams depicting the Male/Female distribution of applicants.

(iv) Pie diagrams indicating the geographic location of applicants.

6. Other information provided in this report consists of:

i)   Table of 1985 Multiple Applications.

ii) Matrix of Multiple Applications.

iii) Individual tables and matrices (similar to i and ii above) for
     selected program areas: Engineering, Business, Nursing and
     Education.

iv) Regional Map giving boundaries used for reporting on the geographic
     distribution of applicants.

i) Table of 1985 Multiple Applications.

ii) Matrix of Multiple Applications

iii) Individual tables and matrices (similar to i and ii above) for selected program areas: Engineering, Business, Nursing and Education.

iv) Regional Map giving boundaries used for reporting on the geographic distribution of applicants.

INTREPRETATION OF BOX DIAGRAMS

The box diagrams which show the pattern of multiple applications between institutions appear first for each institution in the following pages.

The box diagrams show the number of applications received from people who also applied to other institutions. These applications are also shown as percentage of total applications received by that institution. For example, in the box diagram for the University of Alberta, the university received applications from 2 490 people (or 24.1% of the total applications received by the university) who also applied to other institutions (i.e. multiple applicants). These applications were made to the other institutions as indicated in the diagram. That is, there were 315 instances (or 3% of the total applications received) where an applicant had applied to both the University of Alberta and NAIT.

It should be noted that the total number of multiple applicants (i.e. 2 490 for the University of Alberta) will <u>not</u> equal the total number of applications also received at the other institutions as indicated in the diagrams. This is because an applicant may have made several applications to various institutions. For example, an applicant to the University of Alberta who is counted once in the 2 490 figure may have made applications to both the University of Calgary and to NAIT and is thus recorded twice.

III. OTHER DATA

INTREPRETATION OF TABLES AND MATRICES

Main Table and Matrix

The following tables and matrices show the pattern of multiple applications between institutions.

The tables indicate the number of persons who applied to one, two or three institutions. For example, the first table shows 10 326 persons applied to the University of Alberta. Of those applicants, 2 490 persons also applied to other institutions.

The matrices show the total number of applicants to each institution (underlined) and the number of applications submitted to other institutions by those applicants. For example, the first matrix shows there were 1 163 persons applying to both the University of Alberta and the University of Calgary.

Program Area Tables and Matrices

The tables and matrices for the selected program areas contain the same type of information except the data are for selected programs within the specified institution. For example, the area of Engineering at the University of Alberta received 1 421 total applicants. Of those applicants, 216 also applied to the University of Calgary.

* That is, the number of applicants who also applied to one or more other institutions.

Notes: 1. The data shown are for new applications to the institution.

2. Not all these applicants are new to the system. Some are making application for a new place at
institution but in the past year already occupied a place at another.

ADDENDUM

This report, in conjunction with the main report, is designed to assist institutions in their planning activities. The Multiple Applications Study has provided a wealth of data on applicants - only some of which is contained in the two reports.

The Research, Science and Planning Branch welcomes comments and suggestions from institutions on the material presented in the reports. If an institutions is particularly interested in more detailed data which are not included in the reports, the Research, Science and Planning Branch is willing to discuss how this data could be made available to the institution.

Comments or requests should be directed to:

Peter Hill
Director
